

How Notify transformed Fourway's risk management through real-time reporting and data-driven insights

About

Partner since: 2021

Employees: 100

Industry: Construction and Transportation UK HQ: London

Challenge

Before implementing Notify, Fourway's health and safety processes relied on email and spreadsheets, creating inefficiencies such as inconsistent reporting and missed opportunities to proactively act on safety data. The Company Board identified three key objectives for improvement:

- Supporting staff with tools to report incidents quickly in demanding environments
- Driving digital transformation by automating processes & reducing admin tasks
- Leveraging data to improve safety predictability & enable continuous improvement

Solution

Fourway transformed its health and safety processes by migrating from manual, spreadsheet-based systems to Notify's Incident Management and Audit modules. The Notify App enables seamless reporting of safety events, ensuring prompt responses to safety issues and consistent data collection, while simplifying life for site staff.

Notify's advanced analytics also empower the HSQE team to extract real-time insights, track trends, and optimise resources, driving data-driven decision-making, while achieving greater transparency and compliance.

Results

Improved risk mitigation with actionable data & insight.

Significant reduction in time for admin tasks.

Improved safety culture through easy-to-use apps and real-time reporting.

Fourway use Notify for [Incident Management](#), [Audits and Inspections](#), [Actions](#) and [Safety Intelligence](#)

FOURWAY

Notify

Notify reduces our reliance on paper-based systems and drives higher usage of mobile and tablet technology. It automates the site management process reducing the burden on front line staff.

Within the first year we were able to show outcomes in efficiency improvements, reduced correction time and mitigation of site risks."
